

5

WE CLAIM:

1. A system for enabling digital audio data files to be played on a remote audio device, the system comprising:

 a host PC configured to be connected to the Internet, said host PC configured to store digital audio data files and receive streamed digital audio files;

10 one or more electronic device configured to be operably connected to said host PC and coupled to one or more remote devices, said one or more electronic devices configured to receive said digital audio data files and convert said digital audio data files to a format compatible with said remote devices; and

15 a remote device for controlling said the transmission of said digital audio data files to said one or more electronic devices.
